Art Unit: 1756

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-18, drawn to an electrophotographic apparatus, classified in class 399, subclass 159.

II. Claims 19 and 20, drawn to an image forming method, classified in class 430, subclass 126.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by hand. The charging step can be performed by vigorously rubbing the surface of the latent electrostatic image-bearing member with a soft material, such as a cotton or silk handkerchief. The light irradiating step can be performed by placing by hand the charged member in a digital image exposure device having a resolution of 600 dpi or more, which comprises a plurality of light-emitting diodes (LED) aligned in a main scanning direction that are controlled by a

computer to form an electrostatic latent image on the charged member; and removing by hand the exposed member from the digital image exposure device. The developing step can be performed by hand sprinkling a toner onto the image-wise exposed latent electrostatic image-bearing member from a can that comprises the toner. The transfer step can be performed by placing a receiving medium, such as a piece of paper, on the toned image on the image-bearing member and hand pressing the surface of the receiving medium to the image member with a block, and then separating the receiving member with the transferred toned image from the image member.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1756

4. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
